ALGAE-GON 247

Clean water – it's fundamental to life. And it's critical to sustaining economic growth – from agriculture to commercial fishing to tourism. Yet uncontrolled algae growth can quickly put a chokehold on any and all of these activities, bringing progress to a halt.

ALGAE-GON 247 breathes new life into the age-old problem of algae control, suppressing algae, bacterial odors, and harmful gases associated with standing water that contains organic matter, including:

Potable Water Supplies/Reservoirs

Lakes

Ponds

Irrigation Reservoirs

Decorative Fountains

Fish Farms

Feedlot Run-Off Lagoons

Animal Confinement Facilities

Waste Water Systems/Facilities

Unique Formulation with Predictable Results

As a unique, low-level algicide/bactericide, ALGAE-GON 247 contains a proprietary "carrier" that holds the algicide in solution over long periods of time, in a wide range of water conditions. ALGAE-GON 247 delivers 100% biologically active algicide and bactericide. Because every drop contains active formulation within a rigid tolerance, every application delivers predictable results.

Safe for Aquatic Life

Sustaining aquatic life is equally important when treating algae growth. That's why ALGAE-GON 247 was designed to allow sectional treatment of the total water area, allowing fish to move into untreated areas. Fish and other aquatic life get the oxygen they need, while algae decomposition proceeds.

Suitable for Treatment, Prevention, and Long-term Control

Because the release of ALGAE-GON 247's active ingredient is controlled by biological demand such as algae bloom, instead of by water conditions, it allows treatment even before an outbreak occurs and allows for long-term algae control without overtreatment.

ALGAE-GON 247 is a registered biocide with the United States Environmental Protection Agency (US-EPA) and is approved as a drinking water additive pursuant to ANSI/NSF Standard 60.

Other Selected Products from Potech USA

GREASE HUNTER PLUS

When foul odor overcomes food odor, business turns elsewhere. Blocked drains and grease traps in food service, food processing, and other commercial settings cost money -- in lost business and costly repairs from blockages and repeated but failed chemical treatments in the past.

GREASE HUNTER PLUS is a synthetic blend of selective bacteria for controlling odors and bio-degrading fats, oils and greases in drain lines and grease trap applications. Using a natural bio-enzymatic process, GREASE HUNTER PLUS eliminates excessive organic deposits and the associated odors.

While traditional chemical treatments dilute and wash away, GREASE HUNTER PLUS keeps on working to remove even the most resistant grease quickly. It's safe for users and easy on pipes. Plus, it's beneficial to the environment. From fast food restaurants to butcher shops, businesses turn to GREASE HUNTER PLUS to hunt down grease and keep their operations flowing smoothly.

SAFE-STRIDE®

Slips and falls account for 40% of the dollars paid out in insurance claims in the food industry alone.* SAFE-STRIDE® has been shown to reduce the dollars paid in Workers Compensation claims by over 95%**.

SAFE-STRIDE is a chemical treatment applied to commercial and residential flooring, concrete, and other pedestrian surfaces to reduce the risk of accidents and falls. With 20 years of research and development behind it, SAFE-STRIDE is proven effective on a variety of indoor and outdoor surfaces and across a variety of applications including walkways, stairways, lobby floors, commercial kitchen and bathroom floors, bathtubs and showers.

A walkway surface treated with SAFE-STRIDE is actually safer in a wet condition than is a dry untreated surface. That's just one reason why subway systems, hospitals, schools, restaurants, hotels, amusement parks and warehouses are among the many who turn to SAFE-STRIDE for sure footing.

* Accident Facts Compiled by the National Safety Council

** 1992, "Safe Georgia" study conducted by the insurance industry and the Occupational Safety & Health Administration of the U.S. Department of Labor (OSHA) to identify ways to improve safety conditions in the workplace.

About

POTECHUSA INC

Potech USA, Inc. is a global leader in applied science to enhance and protect our environment. Established in 1989 in Tampa, Florida, Potech USA was founded by Paul Chao who recognized a growing need to improve the safety and quality of the environments in which we live and work. Applying the latest scientific advances in environmentally-friendly ways has been at the core of the company's success and growth for nearly two decades.

Today, Potech USA manufactures and distributes products that improve how people live and work in over 50 countries across North America, South America, Asia, and the Pacific Rim. Serving the needs of municipalities, the commercial construction trade, and hospitality industry, Potech USA is making a positive difference – improving water quality, enhancing safety in the workplace, and impacting operational efficiencies in locations across the globe.
